

EcoVision Monitoring System

Cost: This model is an expensive prototype. The manufacturer is currently working on models that should cost less than \$2,000.

Payback: N/A

EcoVision is a wall mounted real time, energy and water monitoring system providing building occupants with immediate feedback on their consumption.

EcoVision provides precise data on:

- Electricity consumption
- Natural gas consumption
- Energy generated by solar panels
- Rainwater tank water consumption
- Rainwater tank water level and remain water capacity
- Potable water consumption
- Room temperatures on a select number of rooms
- Community weather station data

EcoVision solutions estimate savings of between 10% and 20% of average consumption are achievable simply through raising user awareness. This will result in lower energy and water bills and a reduction in greenhouse gas emissions.
